

Installation Training Class for Fujitsu Airstage VRF

Buckley Associates is pleased to offer you access to our complementary Fujitsu Airstage VRF One-Day Installation Training Class.

This class is designed to equip installers with the essential knowledge and certification to install Heat Recovery Systems for Fujitsu Airstage systems. It will also provide an overview of the range of Fujitsu VRF Equipment Requirements.

Training Highlights

- **Certification**: Obtain Fujitsu certification, enabling proper commissioning and registration of systems to qualify for the 10-year extended warranty. A Review Test will be provided at the end of class.
- **System Installation**: Learn to rough-in, install, pipe, and wire Fujitsu Airstage J-Series heat pump, V-Series heat pump and V-Series heat recovery systems.
- **Equipment Placement**: Understand how to select proper equipment locations and utilize the "Design Simulator Report" for accurate pipe sizing and routing.
- **Separation Tubes and Pipe Headers**: Gain knowledge on the use of separation tubes or pipe headers through key examples.
- **Communication Wiring**: Master communication wiring and address settings for indoor units, outdoor units, and heat recovery boxes, including combining multiple outdoor units in one refrigerant circuit.
- **System Setup**: Cover basic function codes and learn how to check the system setup to ensure readiness for startup and commissioning.
